Easy ‘N’ Inexpensive ways to enhance  
third generation Wiking automobiles

## Steps for enhancing “third generation” Wiking automobile sets

Highlight some of the details with Sharpies (fine or ultrafine tip)

Orange for front marker lights

Red for rear marker lights

Silver for parking lights

Stop light red or clear red paint for taillights

Silver paint pen or silver paint for headlights and wheels (a silver Sharpie appears more aluminum while silver paint pens or paints are more reflective.)

Flat black paint for grille

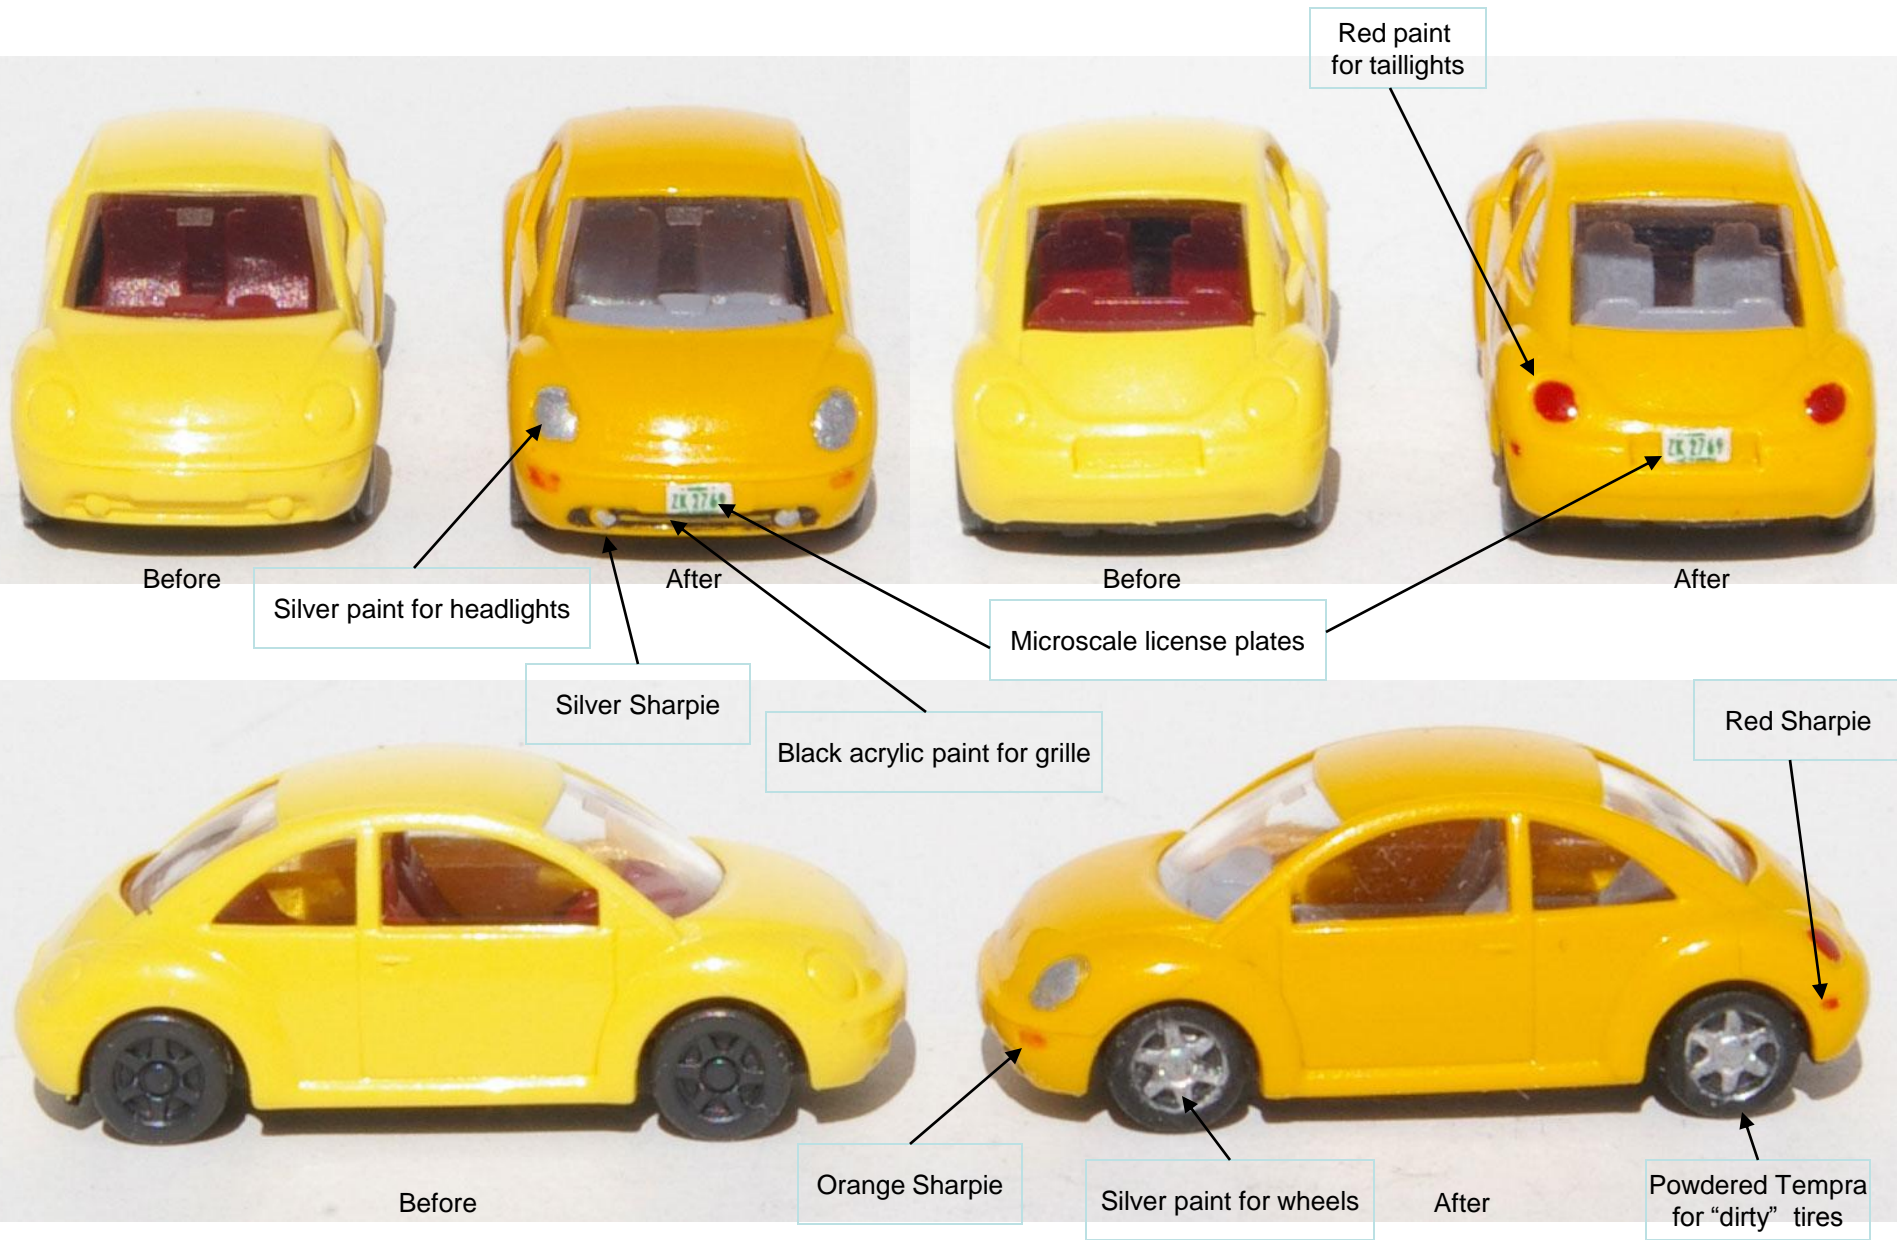

Decal license plates (optional)

Dust with powdered Tempera paints using a dry paint brush (can also tone down the overall shine of the finish)

Black for brake pad (or shoe) dust and tire weathering

Brown for dirt and dust

# Wiking VW New Beetle

# Challenges

Painting the wheel rims, headlights and taillights. There are recessed outlines around the lights, but no “dam” to prevent the paint from spreading to areas where it is not wanted.

These cars have an interior that could also be detailed as well!

Note: The New Beetles shown in the previous slide are different shades of yellow because they are from two different releases
